Bioplastics

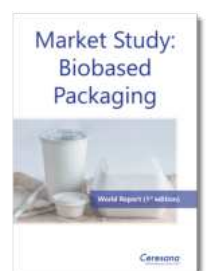

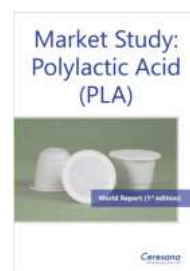

Bioplastics are considered a promising alternative to conventional plastics. They open up new possibilities for sustainable product solutions. At the same time, aspects such as the availability of raw materials, processing and regulatory framework conditions continue to pose key challenges.

Why Us?

As a leading **market research institute**, we provide more than **10,000 customers** with the knowledge base for corporate success. One focus is on bio-based industries in order to support the transformation to a **sustainable economy**.
